ABmag not documented on units page #8244

Edit   New issue

The `ABmag` unit is mentioned twice on the logarithmic units page, but has no documentation and is not even mentioned on the main units page.

@pllim made sure that the new photometry units documentation got into the release.

@mhvk was mentioned as who to contact about getting ABmag documented there.

Indeed, we now at least include http://docs.astropy.org/en/latest/units/index.html#module-astropy.units.photometric - but that doesn't mention any of the `mag*` actual logarithmic units.
